

BEIJING HUADE HYDRAULIC INDUSTRIAL GROUP CO.,LTD.	Directional control valves mechanical operation Type 4WMU/R			RE 22275/12.2004
	Size 6 , 10	up to 31.5 MPa	up to 120L/min	Replaces: RE 22275/05.2001

Features:

- Direct operated directional spool valve with adjustable roller operation
 - Roller lever assembly may be stepped in 90°
 - Radial forces absorb reliably (up to 30°)
 - 19 kinds standard spool function

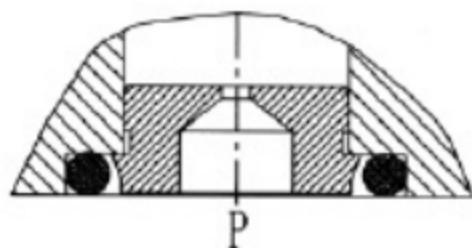

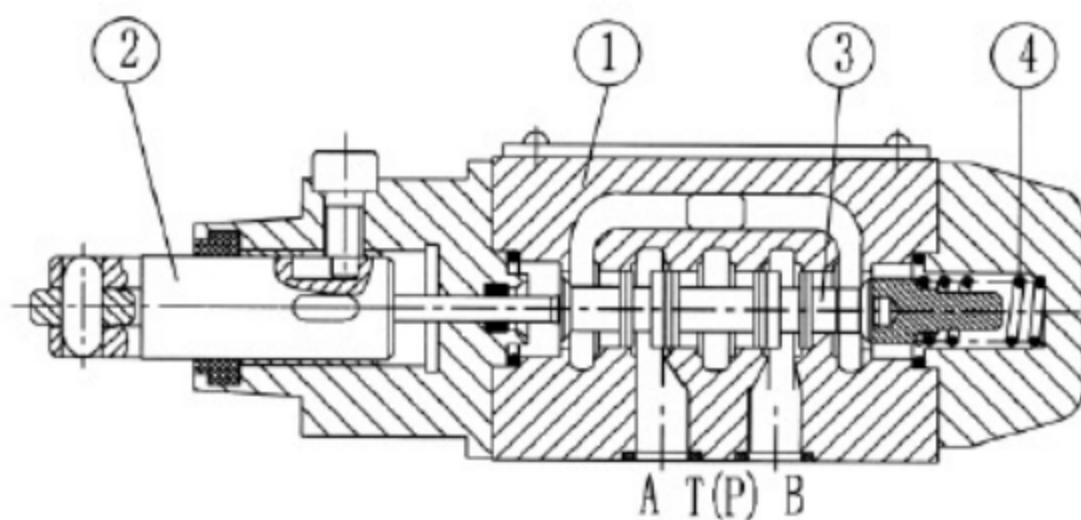

Function, section

Directional valves type WMR are roller operated directional valves.

They basically consist of the housing (1), the roller lever (2), the control spool (3) and the return spring (4).

A plug-in throttle is required if flow greater than the permitted value may occur while the valve spool is being from one position to another. The plug-in orifice is fitted in the P port of the directional valve.

Performance limits (measured at $v=41\text{mm}^2/\text{s}$ and $t=50^\circ\text{C}$)

The operation of the valve is dependent upon the effect of filtration. In order to achieve the given permissible flow rates, full flow filtration $20\mu\text{m}$ is required. The flow forces operating within the valve influence the valve performance. For 4 way valves, the flows given are valid for normal operation with 2 directions of flow (e.g. from P to A and from B to T). If only one flow path is operative e.g. if port A or B is blocked and the valve is used as a 3 way valve, the permissible flows can be very much lower.
